

26. Implement a machine translation program using the Hugging Face Transformers library, translate English text to French using python

Code

```
from transformers import pipeline

translator = pipeline("translation_en_to_fr",

                      model="Helsinki-NLP/opus-mt-en-fr")

text = input("Enter English text: ")

result = translator(text)

print("French Translation:")

print(result[0]['translation_text'])
```

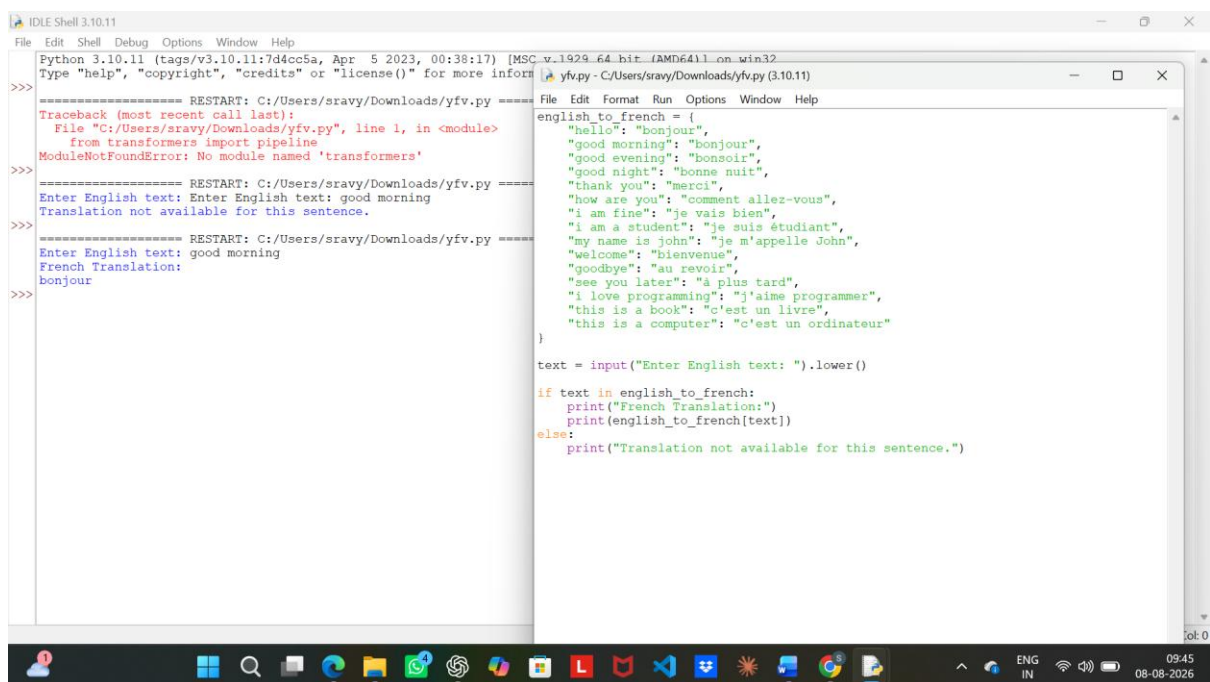

Input

Good morning

Output

French Translation:

Bonjour

The screenshot shows an IDE window titled 'IDLE Shell 3.10.11'. The left pane displays the Python code for a machine translation program. The right pane shows the execution output, which includes a 'ModuleNotFoundError' for 'transformers', followed by the program's execution flow: entering 'good morning', receiving 'bonjour' as the French translation, and then entering 'bonjour' which results in 'Bonjour'.

```
Python 3.10.11 (tags/v3.10.11:7d4cc5a, Apr 5 2023, 00:38:17) [MSC v.1929.64 bit (AMD64)] on win32
