

16. Implement a Python program using the SpaCy library to perform Named Entity Recognition (NER) on a given text.

Code

```
# Install only once in Google Colab

!pip install spacy

!python -m spacy download en_core_web_sm

import spacy

nlp = spacy.load("en_core_web_sm")

text = input("Enter a sentence: ")

doc = nlp(text)

print("Named Entities:")

for ent in doc.ents:

    print(ent.text, "->", ent.label_)
```

Sample Input

Barack Obama was born in Hawaii.

Sample Output

Named Entities:

Barack Obama -> PERSON

Hawaii -> GPE
