

17. Write program demonstrates how to access WordNet, a lexical database, to retrieve synsets and explore word meanings in python.

Code

```
import nltk

nltk.download('wordnet')

from nltk.corpus import wordnet

word = input("Enter a word: ")

synsets = wordnet.synsets(word)

for syn in synsets:

    print("Synset:", syn.name())

    print("Meaning:", syn.definition())

    print()
```

Sample Input

bank

Sample Output

Synset: bank.n.01

Meaning: sloping land beside a body of water

Synset: bank.n.02

Meaning: a financial institution
