

19. Create a program for word sense disambiguation using the Lesk algorithm using python.

Code

```
import nltk

nltk.download('wordnet')

nltk.download('omw-1.4')

from nltk.wsd import lesk

sentence = input("Enter a sentence: ").split()

word = input("Enter ambiguous word: ")

sense = lesk(sentence, word)

print("Best Sense:")

print(sense)

print("Meaning:")

print(sense.definition())
```

Sample Input

Sentence:

I went to the bank to deposit money

Word:

bank

Sample Output

Best Sense:

Synset('depository_financial_institution.n.01')

Meaning:

A financial institution that accepts deposits.

```
nlTK.download('omw-1.4')

from nltk.wsd import lesk

sentence = input("Enter a sentence: ").split()
word = input("Enter ambiguous word: ")

sense = lesk(sentence, word)

print("Best Sense:")
print(sense)
print("Meaning:")
print([sense.definition()])
```

```
... [nltk_data] Downloading package wordnet to /root/nltk_data...
[nltk_data] Downloading package omw-1.4 to /root/nltk_data...
Enter a sentence: I went to the bank to deposit money
Enter ambiguous word: bank
Best Sense:
Synset('savings_bank.n.02')
Meaning:
a container (usually with a slot in the top) for keeping money at home
```
