

22. Create a python program that performs reference resolution within a text.

Code

```
text = input("Enter text: ")

if "He" in text:

    text = text.replace("He", "John")

if "She" in text:

    text = text.replace("She", "Mary")

print("Resolved Text:")

print(text)
```

Input

John is a teacher. He teaches English.

Output

Resolved Text:

John is a teacher. John teaches English.
