

24. Create a python program that recognizes dialog acts in a given dialog or conversation.

Code

```
dialog = input("Enter a sentence: ")

if dialog.endswith("?"):

    print("Dialog Act: Question")

elif dialog.lower().startswith("please"):

    print("Dialog Act: Request")

else:

    print("Dialog Act: Statement")
```

Input

How are you?

Output

Dialog Act: Question

The screenshot shows a Python IDE with a dark theme. The code editor contains the following Python code:

```
[6] ▶ dialog = input("Enter a sentence: ")

if dialog.endswith("?"):
    print("Dialog Act: Question")
elif dialog.lower().startswith("please"):
    print("Dialog Act: Request")
else:
    print("Dialog Act: Statement")
```

Below the code editor, the output is displayed:

```
... Enter a sentence: How are you?
Dialog Act: Question
```

The IDE interface includes a sidebar on the left with icons for Explorer, Search, and Run and Debug. At the bottom, there is a status bar showing "Variables", "Terminal", "09:51", and "Python 3". The Windows taskbar is visible at the very bottom with various application icons and the system clock showing "09:51 30-07-2026".
