

4. Implement a finite-state machine for morphological parsing. In this example, we'll create a simple machine to generate plural forms of English nouns using python

Code

```
word = input("Enter a noun: ")

if word.endswith("y"):
    plural = word[:-1] + "ies"
else:
    plural = word + "s"

print("Plural:", plural)
```

Sample Input

city

Sample Output

Plural: cities
