

6. Implement a basic N-gram model for text generation. For example, generate text using a bigram model using python.

Code

```
text = input("Enter a sentence: ")

words = text.split()

print("Generated Bigrams:")

for i in range(len(words)-1):
    print((words[i], words[i+1]))
```

Sample Input

I love natural language processing

Sample Output

Generated Bigrams:

('I', 'love')

('love', 'natural')

('natural', 'language')

('language', 'processing')
