

8. Implement a simple stochastic part-of-speech tagging algorithm using a basic probabilistic model to assign POS tags using python.

Code

```
tag_dict = {  
    "I": "PRP",  
    "eat": "VB",  
    "apple": "NN",  
    "a": "DT",  
    "the": "DT"  
}  
  
sentence = input("Enter a sentence: ")  
  
words = sentence.split()  
  
for word in words:  
    tag = tag_dict.get(word, "NN")  
    print(word, "->", tag)
```

Sample Input

I eat apple

Sample Output

I -> PRP

eat -> VB

apple -> NN
