

1. Write program demonstrates how to use regular expressions in Python to match and search for patterns in text

Code

```
import re

text = input("Enter a sentence: ")

pattern = r"\b[Aa]\w+"

matches = re.findall(pattern, text)

print("Words starting with A or a:")

print(matches)
```

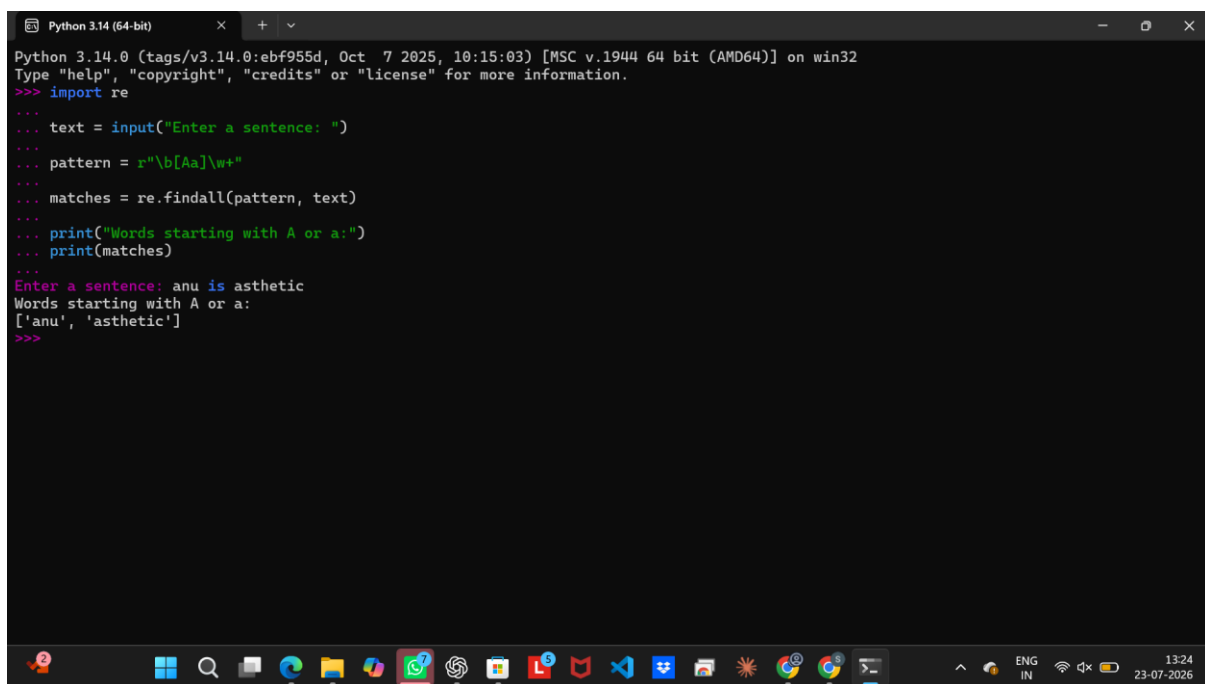

Sample Input

Anu is asthetic

Sample Output

Words starting with A or a:

['Anu', 'aesthetic']

```
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct 7 2025, 10:15:03) [MSC v.1944 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license" for more information.
>>> import re
...
... text = input("Enter a sentence: ")
...
... pattern = r"\b[Aa]\w+"
...
... matches = re.findall(pattern, text)
...
... print("Words starting with A or a:")
... print(matches)
...
Enter a sentence: anu is asthetic
Words starting with A or a:
['anu', 'aesthetic']
>>>
```
